

PANTERA EXTERIOR LED LIGHT KIT

These **High Intensity LEDs** are brighter than those available at your local auto parts store (see picture below). Space City Panteras spent over a year testing different LED options to create the optimum Pantera package. The benefits of this package are:

Safety - **High Intensity LEDs** Produce More LIGHT Than Incandescent Bulbs. You are more likely to be seen and less likely to be rear ended with these super bright brake lights. Blinker action is sharp and crisp.

Reliability - **LEDs** Produce Virtually No Electrical Load - Protects Your 30 Year-Old Electrical System. The draw is so low that your amp gauge needle will not move when you switch on your running lights.

Durability- **LEDs** Generate Practically No Heat - Protects Your 30 Year-Old Plastic Lenses

Convenience and Affordability - We spent significantly more money and time working with multiple suppliers, shipping expenses and testing alternative high performance **LEDs** before figuring out this kit.

High Intensity LED Brake Light

**Incandescent (1157)
Brake Light**

**Typical Auto Supply LED
Brake Light**

Pantera LED Light Kit Contains:
2 Red & 2 Amber Side Marker LEDs,
